

Reading Machine

For Beginning and Struggling Readers:

The Secret Decoder Ring Meets

The 21st Century

Used with traditional books from the bookstore or library

- Readers enter any unknown word to see and hear how the letters and sounds go together.
- Reduces frustration and gives readers the power to self-teach.
- Can be used alone or when reading with a parent or teacher.
- Provides suggestions for books to match readers' interests.

See what users say:

- This app is phenomenal! My child is autistic and over the years we have spent thousands of dollars on reading programs delivered on software or paper...I wish you could have witnessed the transformation from August to October that I have seen, and it is 100% due to this app....THANK YOU SO VERY MUCH...We have worked on so many Dolch words for so many years with no luck for memory or recall until now.
- My six year old loves to use this app! She is very independent and does not like Mom's help when reading.
- I purchased the app for my 23-year-old autistic son who has never been able to read more than a few simple words. He loves the app and uses it every day...this app has provided a key link in developing word recognition.

Includes over 4,000 words from over 100 popular books for young readers!

It's like having an expert reading tutor 24/7, any time a reader encounters an unknown word.

The decoding support – the way that different types of words are broken down into letters and sounds – come from the best research on how children learn to read. Developed by a cognitive psychologist and reading researcher.
